

Cron

Name for Campaign: Cron

Company: Croncat

Track: Defi, Utility

Requested Service: Proposal and plan of execution, description of team / approach / and timeline per the description below.

Bounty: \$10,000 USD equiv in NEAR token

One liner about your business/product:

Reliable, recurring transactions on the blockchain in a decentralized manner.

In short, where we could use your help (scope):

Flex the power of using cron jobs on the blockchain in an interesting and novel way. Perhaps this automates skimming off staking rewards, or allows for an NFT to pay out royalties to many different people that would require multiple transactions. Or show us how a subscription service could use cron to automate monthly payments, the ideas are endless, meow!

Any additional information about the problem:

If folks are unfamiliar with cron jobs or what use cases there may be, there's a great list in the croncat docs here: <https://docs.cron.cat/docs/use-cases>

Inspiration

Every blockchain needs an end user to begin a transaction before work can get done. Since there is no “timer” inside the blockchain, we need to incentivize external folks (we call agents) to get rewarded for giving the blockchain the heartbeat it needs. This unlocks more of the potential of self-sustaining system, and we can't wait to see how people use it.

Are there any restrictions for the campaign:

No

Goals and metrics for this campaign:

150 new cron tasks by end of year.
